Exponential scenario
$w(u) = 7 \cdot e^{-7u/365}$
Bilinear scenario
$w(u) = (1 - u/50)$ if $u < 50$ then 0
Early Peak scenario
$w(u) = \phi(u/365;\ \mu = 0.04,\ \sigma = 0.05)$
Inverted U scenario
$w(u) = \phi(u/365;\ \mu = 0.2,\ \sigma = 0.06)$
Constant scenario
$w(u) = 1$ if $u \leq 180$ then 0
Hat scenario
$w(u) = (u/180)$ then $[1 - (u - 180)/60]$
